# Choosing your dimmer

You know the mood you want. The next question is: how do you create it? Here's how to choose the right dimmers for your home.

## Step 1

Choose the style and colour that best matches or complements the décor of the room.

## Step 2

Choose the dimmer designed to control the kind of lights you have in the room.

### Types of lighting

	<b>INC</b> Incandescent 230/240 V		<b>MVH</b> Mains voltage halogen 230/240 V		<b>LV</b> Electronic and magnetic low voltage 12 V
---	---	---	---	---	---

## Step 3

Calculate the total load.

Incandescent light bulbs have wattage ratings marked on the bulb. Add up the wattage of all the bulbs in the fixture and select a dimmer that is rated above or equal to your total wattage.

### Incandescent 230/240 V

### Mains voltage halogen 230/240 V

### Electronic and magnetic low voltage 12 V

#### Step 4

Decide how many dimmers/switches control the same light fixture and choose from these options.

**If there is only one switch, use a single-pole dimmer** to dim a light from one location. (2-way or multi-location dimmers will work in this application.)

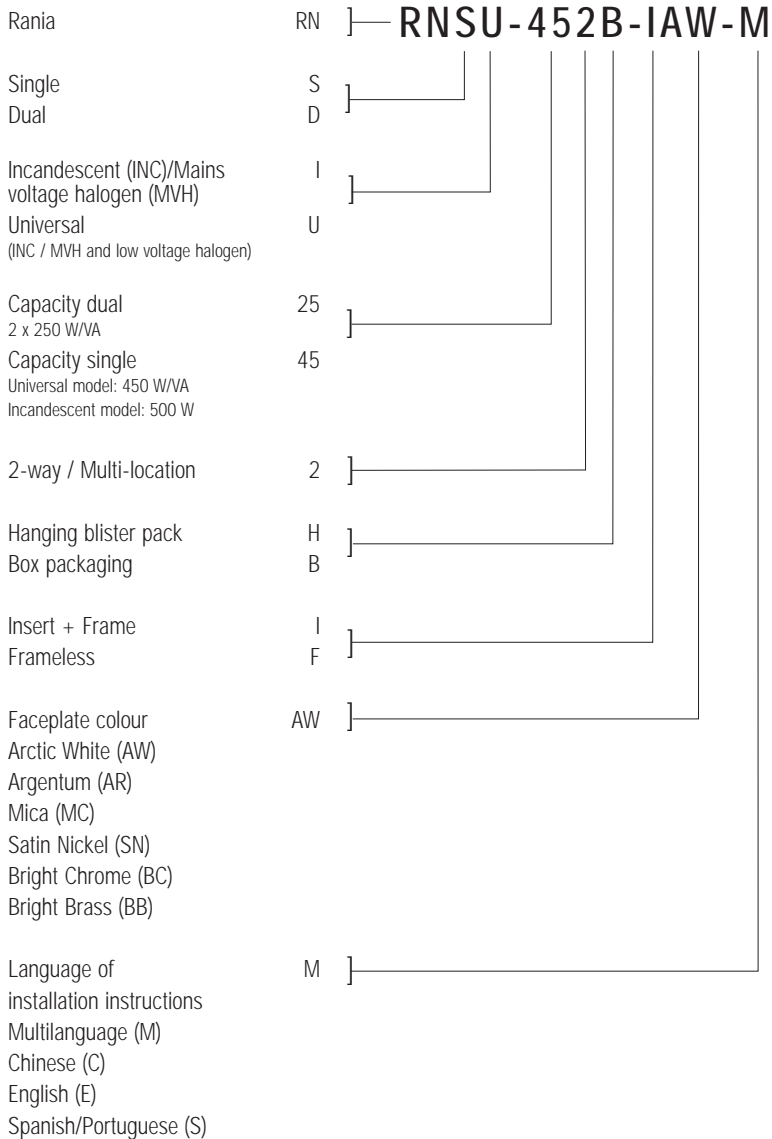

**Multi-location dimming** to dim a light from more than one location – up to ten. Choose one intelligent dimmer and up to nine accessory dimmers. Accessory dimmers work together with the intelligent dimmer, enabling more than one control to dim a light fixture.

Step 1	Step 2			Step 3	Step 4		
Product	INC 230/240 V	MVH 230/240 V	LV 12 V	Load	1 way	2 way	Multi way
Rania single (INC)	x	x		500 W	x	x	x
Rania single	x	x	x	450 W/VA	x	x	x
Rania dual	x	x	x	2 x 250 W/VA	x	x	x
